

Dependent Sections in PowerScheduler is an enhancement from PowerDataSolutions. The reviews in PowerSource on this enhancement are positive, however remember that this is not a Pearson enhancement, therefore not supported by Pearson.

In PowerScheduler, select your group of students and from Functions select **Schedule Mass Enroll**. Once you begin keying in the "Find course.section by autocomplete:" field the dropdown list displays and you can make your selection from this list. As you can see in the example above it will also display whether the course has dependent sections.
